

# The 7th International Palaeontological Congress

## Paleoneurology, cognition, and behaviour of vertebrates, from fish to hominins

The study of the evolutionary history of the vertebrate central nervous system, which is uniquely complex and governs all the higher functions of the body, is crucial for deciphering the origin of the human mind. This symposium welcomes contributions on the evolution of the vertebrate neurosensory system and behaviour, including (but not limited to) research on the fossil and modern brain, inner ear, sense organs, and, when relevant, trace fossils and stone tools.

### Conveners:

- Amélie Beaudet ([amelie.beaudet@univ-poitiers.fr](mailto:amelie.beaudet@univ-poitiers.fr))
- Julien Benoit ([julien.benoit@wits.ac.za](mailto:julien.benoit@wits.ac.za))

If you are interested in this symposium, please contact the convenors.
